

Project Summary

This project is a Task Management Application with a secure backend and a simple frontend interface.

It demonstrates authentication, authorization, CRUD operations, and scalable backend design.

Architecture

- Backend follows MVC structure
- Middleware handles authentication & roles
- Frontend communicates via REST APIs

Security Implementation

- Password hashing using bcrypt
- JWT-based authentication
- Role-based access control
- Protected API routes

Database Design

Two main tables:

Users

- id
- name
- email
- password
- role

Tasks

- id
- title
- description
- user_id (foreign key)
